

Getting Started

An Installation Guide for the IGES Transporter for MultiGen® Creator

April 2004

System Requirements

There are no system requirements over and above the system requirements for running Creator. However if loading large IGES models with polygon counts in excess of 100,000, we recommend:-

- At least 1GHz CPU clock speed or higher
- 512 Mb of RAM or higher

Installation Notes

You will receive the Transporter plug-in either as a zip file or on a CD with a subdirectory \Plug-Ins\Transporter.

If you receive a winzip file Transporter.zip, please create a fresh temporary folder on your hard disk and unzip the contents of the zip file to the temporary folder.

If you have received a CD, please navigate to the \Plug-Ins\Transporter folder.

Then double-click on setup.exe to open the InstallShield Wizard.

Continue to click Next for five screens and then click Install to complete the installation. The installation is straightforward with very few options to be entered by the user. Step 5 determines the directory where the plug-in will be installed.

The default installation is to C:\Program Files\MultigenParadigm and the InstallShield Wizard will install the following files to C:\Program Files\MultigenParadigm\bin\

igesdll.dll
libguide40.dll
libmmd.dll

and to C:\Program Files\MultigenParadigm\config\creator\plugins\IGES_Import\

Iges_Import.dll
together with a number of HTML help files the index to which is Iges_import.htm

If you have installed Creator in a directory other than C:\Program Files\MultiGen-Paradigm, make sure to point the Transporter installer to the directory in which Creator is installed.

To Install to a Different Folder

If you wish to install the plug-in to a different folder, please select the required folder on the appropriate screen on the InstallShield Wizard.

About Licensing the IGES Transporter Plug-In

IGES Transporter licenses will be issued as SingleUser Systems because each copy of the software will be node-locked only to the computer on which it is installed.

Licensing of the IGES Transporter for Creator forms part of the normal licensing arrangements for Creator and be based on the FlexLM Licensing Manager adopted with Creator Version 3.0. Licenses will be issued through your usual MultiGen-Paradigm reseller.

Uninstalling the IGES Transporter Plug-In

Please note that if you install the trial version and subsequently do not wish to purchase a license, **you must uninstall the plug-in** for Creator to work correctly.

You can do this from your computer's Start Menu:-
Start Menu > Settings > Control Panel > Add/Remove Programs.
Find the entry for MST Transporter and click the Remove Button.
